

Company Profile

Medigarments Ltd is the company behind the internationally recognised brands Jobskin® and SDO®. We lead the way in rehabilitation therapy and are the largest UK manufacturer of specialist custom compression garments supplied through therapy and orthotic professionals. Our reputation for the design, and supply of technically advanced garments has been built over 40 years supplying the highest quality made-to-measure products.

Our garments are used to manage scarring as a result of burns or trauma injury. In the field of dynamic compression, they are used to increase sensory and proprioceptive feedback as well as provide musculoskeletal support.

We are dedicated to providing the ultimate in therapy management, with the focus on improving patient quality of life.

Pressure Garments for
Scar Management

Jobskin® Classic™

Jobskin® Classic™ Garments

Made-to-measure products, designed and produced to the finest detail to provide a constant and the correct amount of pressure considered necessary, to a maturing scar to control and treat hypertrophic scarring.

Jobskin® medically effective garments are designed to ensure optimum results in scar management.

Clinical observations and studies have shown that pressure therapy plays an important role in the management of problem scarring. After trauma to the skin, wound healing occurs and there is an imbalance in the orientation and synthesis of collagen fibres.

This resulting subsequent build up of collagen results in the formation of lumpy, hard, raised scars which can cause disfigurement. If the scarring runs across joint surfaces it can result in functional disability due to contractures of the joints.

Efficacy of Pressure Garments

The evidence gathered through international research¹ shows that the early application of pressure therapy garments with the correct wearing regime is successful in helping to control the growth of abnormal scar tissue in problem scarring.

Jobskin® Classic™ garments help to achieve a flatter, softer more pliable scar which results in an improved cosmetic appearance, a reduction of potential contractures.

Indications

The management and prophylactic treatment of problem scarring, including hypertrophic or keloid scars, and associated joint contractures caused by damage to the skin following burns, trauma or post surgical scar complications.

The Product

- A quality made-to-measure compression garment
- Designed to a calculated pressure
- Manufactured from Powernet Lycra®
- Exceptional garment finishing detail
- Excellent stretch quality for patient rehabilitation
- A choice of colours and prints
